## 1 Introduction

This Business Interoperability Specification (BIS) has been realized within the PEPPOL project. It provides a set of specifications for implementing a PEPPOL business process. The document is concerned with clarifying requirements for ensuring interoperability of pan-European Public eProcurement and provides guidelines for supporting these requirements and how to implement them.

## 1.1 Audience

The audience for this document is organizations, and/or ICT-suppliers, wishing to be PEPPOL enabled for the electronic exchange of structured information about criteria selected/requested by a Contracting Authority as part of a Call for Tender. These may include the following PEPPOL stakeholders:

- >> PEPPOL Community Governance
- Contracting Authorities
- Economic Operators
- ICT Providers
- Service Providers

In terms of roles it is addressed to:

- Business Experts
- ICT Architects
- ICT Developers
- ICT Governing participants

## 1.2 **PEPPOL BIS overview**

A PEPPOL BIS (Business Interoperability Specification) is a set of formal requirements for ensuring the interoperable exchange of documents in a pan-European Public eProcurement scenario.

The specifications enable any company to issue electronic documents that fulfil legal and business processing requirements within the European Union and the EEA. It supports a subset of information that is used by most industries and enables users to issue documents (invoices, orders, etc...) that are valid for cross border trade within the European Union and the EEA<sup>1</sup>. It does not support requirements that are specific to certain industries or may be required in other areas.

A PEPPOL BIS can be seen as part of a standardised communication agreement that deals with:

<sup>&</sup>lt;sup>1</sup> EEA is the European Economic Area. Current members are Iceland, Liechtenstein and Norway.

PEPPOL Business Interoperability Specifications Criteria Template BIS

- >> sequence of document in scope;
- content of documents (data elements);
- business rules that govern the exchange.

It aims to enable the trading parties to make their business transactions without a prior or bi-lateral agreement or setup.

Starting from the European Interoperability Framework  $2.0^2$ , PEPPOL identifies 6 interoperability layers (*Figure 1*); the BIS specification detects and describes the set of interoperability requirements at each level

*Figure 1* PEPPOL's Interoperability Framework

- Legal: identifies legal requirements, setting the legal scope of the specification both European and national level.
- Organisation business: starting from a CEN ISSS WS/BII Profile [CEN\_BII], it identifies business requirements, setting the Organization/Business scope of the specification.
- Organisation process: defines the choreography of the business processes covered, i.e. a detailed description of the way the business partners collaborate, play their respective roles and share

<sup>&</sup>lt;sup>2</sup> http://europa.eu/index\_en.htm

responsibilities to achieve mutually agreed goals with the support of their respective information systems.

- >> Semantic: defines:
  - the electronic business transactions exchanged as part of the business process and the sequence in which these transactions are exchanged;
  - the business rules governing the execution of that business process, as well as any constraints on information elements used in the transaction data models;
  - the information content of the electronic business transactions exchanged by referencing a common data model for each of the business transactions.
- Technical interaction: guides the technical implementation of the business specifications and semantic specifications. In particular, it states the bounding between the common data model and a specific syntax (e.g. UBL).
- Technical transport: states the relationships with PEPPOL e-Signature [PEPPO\_Sign] and PEPPOL Transport Infrastructure [PEPPO\_Trans]..

In order to comply with a PEPPOL BIS, it is necessary to comply with each interoperability layer. Conformance with PEPPOL BIS specifications is defined in terms of document instance. A document must conform to series of specifications and business rules that apply to the content.

## 1.3 Criteria Template BIS

### 1.3.1 Scope

The PEPPOL Criteria Template BIS is intended to support the pre-awarding phase of a tendering process involving any Contracting Authority and any Economic Operator in any European country.

It supports the Contracting Authority in: a) defining the suggested and/or requested criteria in an interoperable electronic data format; b) publishing it as part of a Call for Tender.

Actually PEPPOL has defined two architectural approaches for supporting the Contracting Authorities in creating a Criteria Template and a third one is under evaluation. All of them are based on the implementation of a Criteria Editor functionality that can be provided as:

- central component with local service provision for countries that do not have a national system to provide Criteria Editor functionality (*Figure 2*);
- decentred component with central service provision by providing a system-interface to the EVS (*Figure 3*);
- >> (under evaluation) as decentred component with local service provision.

In any case the Criteria Editor functionality is fully compliant to this BIS specification.

### PEPPOL Business Interoperability Specifications Criteria Template BIS

Figure 3 Criterion Editor with local GUI and reasoning as a service

The intended scope for this BIS is:

- ▶ B2G
- Common business processes for cross border tendering
- Regional tendering within EU and EEA
- Mainly for purchase of goods and services and/or services that can be itemized.

### 1.3.2 Summary

Respect to the layers of the European Interoperability Framework 2.0, the PEPPOL VCD BIS addresses interoperability as follows:

- Legal:
  - compliance with directive 2004/18/EC (art. 45-52);
  - legal mappings of relevant evidence to national procurement regulations and European regulation requirements;
  - >> specific National requirements.
- Organization (Organization/Business):
  - This PEPPOL BIS supports B2G
  - >> This PEPPOL BIS supports cross border, regional and domestic tendering in EU and EEA
  - >> This PEPPOL BIS can act as a standardized EDI agreement within a community
- Organization (Process):
  - This PEPPOL BIS supports the economic operator in proofing his capabilities in the tendering process.
- Semantic:
  - The <u>set of information elements</u> is assumed to be sufficient to support Organizational Business and Processing requirements stated above.
  - This PEPPOL BIS defines a set of <u>Business rules</u> ensuring a common way of processing the information elements. The rules are stated in a way that allows automated validation of document instances. Economic Operator cannot issue documents that conflict with these rules.
- Technical Interaction (Process and semantic implementation):
  - Binding compatible with OASIS UBL 2.0, see [UBL]
  - >> ISO/IEC 19757-3 Schematron, for automation of document validation, see [Schematron]
- Technical Interaction (eSignature Validation):
  - Not mandatory in this PEPPOL BIS. Not supported.
- Technical Transport:
  - PEPPOL has developed a Transport Infrastructure but its use is not mandatory in this PEPPOL BIS.
  - If Economic Operators want to use the PEPPOL Transport Infrastructure to exchange preawarding qualification documents complying with this PEPPOL BIS, they must fulfil the approach defined in chapter 8.1 of this PEPPOL BIS.<sup>-</sup>

### 1.3.3 Benefits

When participating in public tenders the Economic Operators are required to provide proof of fulfilment of the qualitative selection criteria requested by the Contracting Authority.

In this scope, potential benefits of using the Criteria Template PEPPOL BIS are:

- the Contracting Authority defines the requested criteria early in the process in an interoperable electronic data format (instead of defining them only in written free text);
- the Economic Operator does not need to "select" the criteria manually (based on the written free text statement of the Contracting Authority) but can use an interoperable electronic data package containing the requested criteria (Criteria Template). The steps "Unterstand, Interpret Criteria" and "Select Criteria" of the Economic Operator are therefore no longer necessary;
- the validation of a VCD package can be done automatically by checking the received evidences against the requested criteria instead of a manual check by the user of Contracting Authority. This automated check can not only prove the technical compliance of a VCD package but also the validity of supplied evidences according the common legal rule set (Ontology);
- the breaks in data transmission and data format changes are eliminated and the number of manual steps are reduced to improve the process quality and reduce the process cycle time.

## 2 Legal interoperability

In this chapter the legal scope for adopting the PEPPOL Criteria Template (CT) Business Interoperability Specifications (BIS) is described. It applies to VCD Systems supporting Contracting Authorities (Customers) and Economic Operators (Suppliers) who reside in countries whose eProcurement legal frameworks are aligned with requirements as stated in this specification.

The legal scope here defined is based on:

- European regulation concerning the criteria for qualitative selection of candidates or tenderers in procedures for the award of public works contracts, public supply contracts and public service contracts (EU Directives 2004/18/EC (art.45-52));
- legal mappings of relevant national procurement regulations and European regulation;
- specific National requirements.

## 2.1 EU Directive

In the perspective of VCD Systems, the relevant legal reference at European level is the directive 2004/18/EC (art. 45-52): it provides the criteria for qualitative selection of tenders in procedures for the award of public works contracts, public supply contracts and public service contracts.

| Criterion Group                                           | Legal Reference          | Subcriteria                                                                                                                                                                            |

| Environmental<br>management<br>standards<br>(sec. 50) | art. 50         | certificates drawn up by independent bodies attesting<br>the compliance of the economic operator with certain<br>environmental management standards |

#### Requirement Leg07: art. 51 - Additional documentation and information

| Criterion Group                                             | Legal Reference | Subcriteria                                                                                                                                              |
|-------------------------------------------------------------|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Additional<br>documentation and<br>information<br>(sec. 51) | art. 51         | The contracting authority may invite economic operators to supplement or clarify the certificates and documents submitted pursuant to Articles 45 to 50. |

# Requirement Leg08: art. 52 - Official lists of approved economic operators and certification by bodies established under public or private law

| Criterion Group                                                                                   | Legal Reference    | Subcriteria                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------------------------------------------------------------------------------------------|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Official lists of<br>approved economic<br>operators and<br>certification<br>by bodies established | art. 50 § 2        | Economic operators registered on the official lists or<br>having a certificate may, for each contract, submit to<br>the contracting authority a certificate of registration<br>issued by the competent authority or the certificate<br>issued by the competent certification body. The<br>certificates shall state the references which enabled<br>them to be registered in the list/to obtain certification<br>and the classification given in that list. |
| under public or private<br>law<br>(sec. 52)                                                       | art. 50 § 5 part 1 | For any registration of economic operators of other<br>Member States in an official list or for their certification<br>by the bodies referred to in paragraph 1, no further<br>proof or statements can be required other than those<br>requested of national economic operators and, in any<br>event, only those provided for under Articles 45 to 49<br>and, where appropriate, Article 50.                                                               |

## 2.2 Taxonomy of the term Evidences

In the pre-awarding phase, the Contracting Authority must either specify the documentation that has to be submitted by Economic Operator or the criteria of qualitative selection and exclusion that have to be fulfilled by him.

In order to clarify the criteria editing procedure requirements with regard to evidence types, PEPPOL has made the document "Legal Specification: Clarifying of Evidence types and User stories" (version 0.3, issue date 25.08.2011). This PEPPOL BIS adopts the "Taxonomy of the term evidence" provided by that legal specification **Fehler! Verweisquelle konnte nicht gefunden werden.** 

Figure 4 Taxonomy of the term evidence

The taxonomy of the concept "evidence" differentiates between:

evidences provided by the candidate himself (e.g. self-declaration, declaration on oath, solemn statement) or

evidence where the issues is not the candidate (e.g. certified authorities and/or [authorized] third parties).

## 2.3 Legal mappings of relevant national procurement regulations and European regulation requirements

In respect of the directive 2004/18/EC, PEPPOL has defined the legal mappings towards the relevant national procurement regulations. This can be considered the PEPPOL position about how the EU directive should be implemented in the different countries.

The mappings representation is constituted of:

- European and national ontologies<sup>3</sup>;;
- national mapping tables<sup>4</sup> (see an example in Appendix A).

The national mapping tables are based upon a mapping template defined by PEPPOL<sup>5</sup>.

The template reflects rules and principles with regard to mapping between criteria at European and National levels and the corresponding evidences that prove these criteria; it follows the structure indicated in *Figure 5*.

Figure 5 Mapping between different Member State regulations

<sup>&</sup>lt;sup>5</sup> *Deliverable 2.2, Chapter 3.4*: Specification of architecture and components enabling cross-border VCD [D2.2, 2010].

<sup>&</sup>lt;sup>3</sup> PEPPOL EIA – PreAward - ICT Components\_EU Ontology and national ontologies with their mappings

<sup>&</sup>lt;sup>4</sup> http://www.peppol.eu/peppol\_components/peppol-eia/eia#ict-architecture/pre-award-eprocurement/models

The mapping template is based upon the European legislation which is interlinked to the national public procurement domains. For every domain a representation of a national index is given; it provides an overview of national criteria demanded in public procurement, and how these are evidenced (i.e. which attestations and/or statements provide what evidence). In this respect, the European criteria of qualitative selection and non-exclusion criteria, which are derived from the European Directive 2004/18/EC, are considered the reference criteria, while the national criteria which are the basis for individual public tenders in respective countries are considered the local criteria. No new legal rules will be created by the mapping procedure. The mapping is solely based on the existing national and European legal framework.

The mapping of criteria and linking to evidences are a comprehensive legal supporting system which can be used according to the requirements described in a call for tender. The interpretation of the Call for Tender (CfT) with regards to criteria is the Economic Operator's responsibility.

## 2.4 National requirements

This PEPPOL BIS specification defines the core set of legal requirements coming from the European and national regulations and the way for mapping them. This ensures a common understanding and enables Economic Operators and VCD Systems to provide all required information in a tendering process.

Nevertheless specific requirements at national level exist but they are out of the scope of this PEPPOL BIS. Here only the normative references are provided. Participants from different countries can develop specific national "extensions" in order to cover their own set of national legal requirements.

An "extension" is a collection of requirements that are not supported by the related BIS and that should be applied in specific context (for example national law). To conform to PEPPOL specifications, an "extension" may not conflict with its BIS, i.e. a message that is valid from the extension perspective must also be valid from the BIS perspective.

## 3 Organizational - Organization/Business Interoperability

Organisational requirements originate from the context of the pre-award phase of public procurement both for national and cross-border procurements in the European Union. The primary scope of the Criteria Template is the tendering phase in which Economic Operators apply for a public contract that is being awarded by a Contracting Authority to purchase certain products or services. Details about actors and their roles as well as the interaction between them will be described in the subsequent sections.

## 3.1 Organizational scope

The Criteria Template BIS defines the exchange of information about the criteria of qualitative selection being part of a Call For Tender between a Contracting Authority ("*Custom*er", acting in the role of a "*Qualifier*") and an Economic Operator ("*Supplier*", acting in the role of an "*Applicant*").

Figure 8 provides a general overview about the use case, involved business partners and their roles.

Figure 6 Tendering process use case - Business Partners and Roles

| Business partner | Description                                                                                                                                                                                                |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Customer         | The customer is the legal person or organization that demands a product or service.<br>A customer can be any public buyer or contracting authority that wants to purchase<br>certain products or services. |
| Supplier         | The supplier is the legal person or organization that provides a product or service. A supplier can be any economic operator that sells goods or provides services.                                        |

Table 1 and Table 2 describe the partners and respective roles in more detail.

| Role/Actor                          | Description                                                                                                                |  |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------|--|
| Qualifier/<br>Contracting Authority | The party that provides the criteria information.                                                                          |  |
| Applicant/<br>Economic Operator     | The party that receives criteria information (as part of a Call for Tender) with the intention to participate in a tender. |  |

Table 1 Description of Business Partners

#### Table 2 Description of Actors/Roles

In addition to this overview, the use case of the tendering phase can be decomposed into a more detailed use case diagram (*Figure 6Figure 7*). The single use case "Define Criteria" (highlighted with green background color) is the main focus of the VCD and this BIS. The other use cases are only mentioned in order to provide a general picture of the tendering phase.

Figure 7 Tendering process use case - Sub-processes description

The specification of criteria of qualitative selection is the part of tendering process during which the Contracting Authority defines the relevant criteria for a specific tender to be proven by Economic Operators that wish to participate in the tender.

The criteria are collected in an interoperable electronic data package (Criteria Template), that can be issued with a Call for Tender (CfT), placed on an eTendering platform, send per mail, etc.

The Economic Operator can use this criteria as a basis for the VCD preparation. Finally, the Contracting Authority can automatically validate a VCD package by checking the received evidences against the requested criteria. This automated check can not only prove the technical compliance of a VCD package but also the validity of supplied evidences according the common legal rule set (Ontology).

### 3.2 Business requirements

PEPPOL has identified the set of business requirements needed to meet legal requirements and common business needs in specifying and exchanging criteria that are relevant for a tender in tendering process in

EU and EEA. This Criteria Template BIS defines how to define relevant qualification criteria electronically satisfying these business requirements.

The business requirements identified, grouped by categories, are the following:

#### Criteria Template's content

- Org01: Criteria Template identification
  - The date and time on which the Criteria Template document has been issued must be provided.
- Org02: Contracting authority (CA)

The CA issuing the Criteria Template document must be specified.

Org03: Pre-qualification Body

It should be possible to specify a list of pre-qualification or evidence-delivering agencies that the CA can use to retrieve Evidences for itself.

Org04: Legal domain

The legal domain under which legislation it is carried out must be specified.

>> Org05: Call for Tender

It should be possible to provide the Call for Tender reference.

#### Call for Tender 's information

>> Org26: Call for Tender identification

The Call For Tender's name must be provided.

#### Contracting authority's information

>> Org7: Contracting Authority identification

Information needed to identify the Contracting Authority must be provided; they are: name, identification, endpoint id.

Org8: Contracting Authority contact information

Information needed to contact a Contracting Authority should be provided; they are: Postal address, telephone number, fax number, eMail address.

#### Criteria list

Org09: National criteria

The Criteria Template document should be able to include CA national criteria.

Org10: EU criteria

The Criteria Template document should be able to include atomic EU criteria.

Org11: Additional criteria

The Criteria Template document should be able to define additional criteria which are not part of the criteria defined in the EVS ontologies and give them a CA national name/description.

Org12: Tender role/type

The tender role and the type a list of required criteria is related to must be provided.

#### Criterion's information

Org13: European regulation

For each criterion the EU legal reference must be provided.

**PEPPOL Business Interoperability Specifications** 

#### Criteria Template BIS

#### Org14: Lots information

It should be possible to provide relevant information regarding lots for a criterion.

>> Org15: General information

It should be possible to provide annotations, additional information or complementary information for a criterion.

#### Proving Evidence's information

Org16: Translation

It should be possible to specify if a translation is required and which translation type, e.g. none, simple translation, certified translation, notarised translation.

Org17: Attestation

It should be possible to specify if a certification of the authenticity is required and which type, e.g. none, Legalization or apostille.

Org18: Attestation

It should be possible to specify what kind of copy is required, e.g. unqualified copy or certified copy.

Org19: Candidate statement

It should be possible to specify a candidate statement.

#### Candidate statement's information

Org20: Minimal substitute level

The type of candidate statement is required as the minimal substitute must be specified.

Org21: Template document

It should be possible to define/include a predefined template document for providing the candidate statement.

#### Digital signature

Org22: Criteria template document signature

The Criteria template document shall be capable of being signed and containing the signature.

Org23: Document signature verification results

The Criteria template document shall contain information about the validation/verification of signatures of a document that has been attached to it.

## 4 Organizational - Process Interoperability

## 4.1 Process model

The Criteria Template (containing information about the criteria that tenderers are required to provide in a specific tendering process) needs to be provided by Contracting Authority and received by the Economic Operator in a specified process that is understood, agreed and supported by both parties. This Criteria Template PEPPOL BIS specifies this process in terms of collaboration (**Fehler! Verweisquelle konnte nicht gefunden werden.** 6...) and transactions sequence (**Fehler! Verweisquelle konnte nicht gefunden werden.**) happening under a set of pre and post conditions (*Table 3*).

| Figure 8 | Collaboration |
|----------|---------------|
|----------|---------------|

| -                                                                                                             |                                                                                                                                                                                                                                |
|---------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                               | The Qualifier collects the criteria in a Call for Tender in an interoperable electronic data package (Criteria Template).                                                                                                      |
| Description                                                                                                   | The Qualifier publishes the Criteria Template with the related Call for Tender (CfT); this can be done in several way (using an eTendering platform, by mail, etc.). In any case the Applicant receives the CfT with criteria. |
|                                                                                                               | The country and legal domains of the Qualifier are modeled as ontology in the European VCD system.                                                                                                                             |
| Pre-condition                                                                                                 | The country and legal domains of the Qualifier are not modelled as ontology in the European VCD system but an European reference ontology, criteria code lists or "initial basic ontology" exists and can be used instead.     |
| Post-condition The Applicant does not need to interpret the criteria (the VCD Package automatically created). |                                                                                                                                                                                                                                |

#### Table 3 Collaboration description

Figure 9 ... Transaction sequence

## 4.2 Collaboration business rules

- A Criteria Template states selected atomic criteria for a specific tender to be proven by economic operators that wish to participate in the tender.
- A Criteria Template document is "Call for Tender"-specific but not tenderer-specific.
- A Criteria Template document can include one or more embedded templates documents, depending on the number of candidate statements defined for each proving evidence.
- A Criteria Template can be used for automatically validating a VCD package. This automated check can not only prove the technical compliance of a VCD package but also the validity of supplied evidences according the common legal rule set (Ontology).

## **5** Semantic Interoperability

## 5.1 Concept database

All Criteria Template concepts existing in the domain of the VCD System are collected in the VCD concept database. It provides an aggregated list of all concepts that occur in the domain of the Criteria Template and VCD and its software components. Furthermore, it defines each concept and specifies the rules for usage and creation of values. In result, the concept data base provides a common specification and understanding of the VCD information model to facilitate semantic interoperability.

Two different versions of the VCD concept database exist: 1.3.1 and 2.0; only the second one includes the Criteria Template concepts. The transaction data model for Criteria Template described in chapter 5.2 of this PEPPOL BIS is based on the concept data base version 2.0.

## 5.2 Transaction Data Model

This PEPPOL BIS defines the Criteria Template transaction data models (see Appendix A) to have been used by the Contracting Authorities belonging to the PEPPOL Community to provide the suggested and/or requested criteria in a tender in a cross-border context and with stricter adherence to EU directives.

The following table shows how the transaction data model supports the identified business requirements (listed in section 3.2).

| Requir.<br>ID | Target                               | Criteria Template Data Model's Element                                                                                                                                           |
|---------------|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Org01         | Criteria Template identification     | <ul> <li>Criteria Template. UUID</li> <li>Criteria Template. Compilation Date</li> <li>Criteria Template. Compilation Time</li> </ul>                                            |
| Org02         | Contracting authority                | - Criteria Template. Contracting Authority Party                                                                                                                                 |

| Org22 | Criteria template document signature    | <ul> <li>Criteria Template. Signature</li> </ul>                               |
| Org23 | Document signature verification results | - Document Reference. Result Of Verification                                   |

The set of information defined in each transaction data model can be restricted or extended depending of the context by adding business rules and/or refining the semantic of information elements. This means define an "extension" of this BIS specification.

Possible business rules that constrain the use or value of an information element include:

- Restrictions on cardinality.
- > Optional information elements become mandatory.
- > Optional information elements become not permitted.

Possible information element restrictions include:

- Precision in semantics of information elements.
- Precision in formats of information elements.
- Choice of Code lists (where not defined).

- Restrictions on values in code list.
- Dependency constraints between values in information elements.

To conform to PEPPOL specifications, an "extension" may not conflict with its BIS, i.e. a message that is valid from the extension perspective must also be valid from the BIS perspective.

## 5.3 Validation rules

In order to facilitate interoperability in cross border trade, sets of validation rules have been defined.

The validation rules are sets of rules that clarify the content of Criteria Template instances by stating mandatory fields, fixed values (like code lists), dependency between fields in the same object and dependency between different objects.

The rules are grouped into two main sections depending on their scope:

- rules working on a single object (i.e.: a Criteria Template XML document);
  - >> check mandatory fields, fixed values and dependencies between fields;
  - >> check the use of mandatory set of values on specific fields (code lists).

Each rule has an error level that can be stated as:

- warning: offering recommendations to improve the quality of the instance or regain full validity
- *fatal*: the rule point to a major issue of consistency or data correctness.

## 5.3.1 Validation rules from VCD concept database 2.0

The *Table 4* collects the set of validation rules coming from the concept database 2.0 and affecting the Criteria Template document model elements.

| RuleID        | Rule                                                                                                                              | Error level |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------|-------------|
| VCD-CT02-R008 | The electronic mail address SHOULD have a valid eMail address value.                                                              | warning     |
| VCD-CT02-R009 | A UUID MUST have the scheme name "UUID Version 4", scheme agency name "ietf" and scheme uri "http://tools.ietf.org/html/rfc4122". | fatal       |
| VCD-CT02-R024 | The Legal Text element MUST have the attribute LanguageID in order to define the language.                                        | fatal       |
| VCD-CT02-R027 | The Further Information element MUST have the attribute LanguageID in order to define the language.                               | fatal       |
| VCD-CT02-R029 | A Criteria Template SHOULD not contain empty elements.                                                                            | warning     |
| VCD-CT02-R031 | If the Criteria Template refers to the Call For Tender, the Call For Tender's name MUST be provided.                              | fatal       |
| VCD-CT02-R032 | The Evidence Provision Information MUST have either an attestation or a candidate statement.                                      | fatal       |

| VCD-CT02-R033 | A translation MUST not be present if the attestation doesn't exist.                                                                         | fatal |
|---------------|---------------------------------------------------------------------------------------------------------------------------------------------|-------|
| VCD-CT02-R034 | If evidence provision information refer to a pre qualification body, the PreQualificationID MUST refer to an existing PreQualificationBody. | fatal |
| VCD-CT02-R035 | If a candidate statement refers to a template document, it MUST exist.                                                                      | fatal |
| VCD-CT02-R036 | A Template Document MUST refer at least one Criterion.                                                                                      | fatal |
| VCD-CT02-R037 | A Template Document MUST refer existing Criteria.                                                                                           | fatal |

Table 5 Validation rules affecting VCD 2.0 instances

The *Table 6* collects the set of coded values validation rules coming from the concept database 2.0 and affecting the Criteria Template document model elements.

| RuleID      | Rule                                                                                                              | Error level |
|-------------|-------------------------------------------------------------------------------------------------------------------|-------------|
| VCD-02-R012 | The DomainCode MUST have a value that is defined in the DomainCode code list.                                     | fatal       |
| VCD-02-R019 | The AddressTypeCode MUST have a value that is defined in the AddressTypeCode code list.                           | fatal       |
| VCD-02-R022 | The LocaleCode of a Language MUST have a value that is defined in the LocaleCode code list.                       | fatal       |
| VCD-02-R023 | The SchemaAgencyName MUST have a value that is defined in the SchemaAgencyCode code list.                         | fatal       |
| VCD-02-R025 | The LanguageID MUST have a value that is defined in the LocaleCode code list.                                     | fatal       |
| VCD-02-R039 | The TendererRoleCode MUST have a value that is defined in the TendererRoleCode code list.                         | fatal       |
| VCD-02-R040 | The TendererTypeCode MUST have a value that is defined in the TendererRoleCode code list.                         | fatal       |
| VCD-02-R041 | The RequiredDocumentTypeCode MUST have a value that is defined in the RequiredDocumentTypeCode code list.         | fatal       |
| VCD-02-R042 | The MinimumSubstitutionLevelCode MUST have a value that is defined in the MinimumSubstitutionLevelCode code list. | fatal       |

Table 6 Validation rules affecting both VCD and VCD Package 2.0 instances

## 5.4 Identifiers

PEPPOL has defined a "Policy for Use of Identifiers" that describes the specific case for Party Identifiers and principles that should be followed in other cases.

About the specific use of identifiers in VCD and VCD Package this PEPPOL BIS states as follows (Table 7):

| Identifier                     | Constraint                                                                                                                                                                                                  |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Requested Criterion Identifier | At least the following attributes must be specified: schemeName (default value:"UUID Version 4"); schemeAgencyName (default value: "ietf"), schemeURI (default value: "http://tools.ietf.org/html/rfc4122") |
| Call For Tender Identifier     | No constraints                                                                                                                                                                                              |
| Document Reference Identifier  | At least following attributes must be specified: schemeName, schemeURI, schemeAgencyName.                                                                                                                   |
| Party Identifier               | POLICY 1, POLICY 2, POLICY 3 from "Peppol Policy for Use of Identifiers"                                                                                                                                    |
| Signature Identifier           | At least following attributes must be specified: schemeName, schemeURI, schemeAgencyName                                                                                                                    |
| Endpoint Identifier            | POLICY 1, POLICY 2, POLICY 3 from "Peppol Policy for Use of Identifiers"                                                                                                                                    |
| URI                            | No constraints                                                                                                                                                                                              |
| UUID                           | At least following attributes must be specified: schemeName, schemeURI, schemeAgencyName.                                                                                                                   |

Table 7 Criteria Template

### 5.5 Code lists

A number of information elements values are constrained to be those in a list of codes known as Code Lists; the specific Code Lists used in business transactions must be common between business partners in order to achieve interoperability. *Table 8* lists the code lists identified by PEPPOL to be used in this PEPPOL BIS.

| Information elements      | Code List                      | Issuer Agency | Genericode                         |
|---------------------------|--------------------------------|---------------|------------------------------------|
| AddressTypeCode           | Address Type Code              | PEPPOL        | AddressTypeCode_1.0.0.gc           |
| BinaryObjectMimeCode      | Binary Object Mime<br>Code     | IANA          | BinaryObjectMimeCode_1.0.0.gc      |
| CharacterSetCode          | Character Set Code             | IANA          | CharacterSetCode_1.0.0.gc          |
| CountryIdentificationCode | Country Identification<br>Code | ISO           | CountryIdentificationCode_1.0.0.gc |
| DocumentTypeCode          | Document Type Code             | PEPPOL        | DocumentTypeCode 1.0.0.gc          |
| DomainCode                | Domain Code                    | PEPPOL        | DomainCode_1.0.0.gc                |
| HashValidateResultCode    | Hash Validate Result<br>Code   | PEPPOL        | HashValidateResultCode_1.0.0.gc    |
| LocaleCode                | Locale Code                    | UNICODE       | LocaleCode_1.0.0.gc                |

## 6 Technical Interaction Interoperability – Process and Semantic Implementation

## 6.1 Example XML Implementation

This section uses a sample of request for qualification, from a Contracting Authority to an Economic Operator, to demonstrate how these information should be provided by a Criteria Template XML document.

## 6.1.1 A request for qualification example

#### Contracting authority's information

Ministry of Finance in Austria

Hintere Zollamtsstraße 2b, 1030 Vienna

Contact point

Mr. Sam Sample

Telephone: +43 261 788 3424

Email: samsample@bmf.gv.at

Legal domain: Bundesvergabegesetz (BVerG) Austria.

#### Call for Tender's information

Name: egosta

<u>Additional requirements</u>: This post-qualification process will be executed electronically. Qualification documents can be submitted as scanned copies and there is no specific signature method required. Qualification documents have to be submitted in German or English language (certified translation are accepted). The issuer of an evidence has to be authenticated through a legalization or apostille.

| Qualifi | Qualification criteria                                                                                 |  |  |
|---------|--------------------------------------------------------------------------------------------------------|--|--|
| a)      | National Regulation Name: Wesentliche Leistungen (Referenzen)                                          |  |  |
|         | National Regulation: eine Liste der wesentlichen in den letzten drei Jahren erbrachten                 |  |  |
|         | Dienstleistungen im Hinblick auf Projekte im Bereich ePartizipation                                    |  |  |
|         | National legal reference: § 75 (7) Z 1 BVergG                                                          |  |  |
|         | European regulation name: List of works                                                                |  |  |
|         | European regulation: list of works carried out over last five years; principal deliveries effected and |  |  |
|         | main services provided in the past three years in the domain of eParticipation                         |  |  |
|         | European legal reference: art. 48 §2 (a)                                                               |  |  |

 b) <u>National Regulation Name</u>: Technischen Ausrüstung und Maßnahmen zur Qualitätssicherung <u>National Regulation</u>: eine Beschreibung der technischen Ausrüstung, der Maßnahmen des Unternehmers zur Qualitätssicherung; <u>National legal reference</u>: § 75 (7) Z 2 BVergG
 <u>European regulation name</u>: Description of technical facilities <u>European regulation</u>: description of technical facilities and measures used by the supplier or service provider for ensuring quality <u>European legal reference</u>: art. 48 §2 (c)

#### Additional qualification criteria in case of subcontracting

a) <u>National regulation name: Angabe von Subaufträgen</u>
 <u>National regulation: eine Angabe, welche Teile des Auftrages der Unternehmer unter Umständen</u>
 <u>als Subaufträge zu vergeben beabsichtigt;</u>
 <u>National legal reference: § 75 (7) Z 9 BVergG</u>
 <u>European regulation name</u>: Proportion to Subcontract
 <u>European regulation</u>: an indication of the proportion of the contract which the services provider intends possibly to subcontract
 <u>European legal reference</u>: art. 48 §2 (i)
 b) <u>The qualifications requested in "Qualification criteria" a) and b)</u>

# Additional qualification criteria in case of Consortia c) National regulation name: Angabe von Subaufträgen National regulation: eine Angabe, welche Teile des Auftrages der Unternehmer unter Umständen als Subaufträge zu vergeben beabsichtigt; National legal reference: § 75 (7) Z 9 BVergG European regulation: an indication to Subcontract European regulation: an indication of the proportion of the contract which the services provider intends possibly to subcontract European legal reference: art. 48 §2 (i) d) The qualifications requested in "Qualification criteria" a) and b) e) Bidding consortia will be only considered if a declaration/candidate statement signed by all members will be provided including the following elements: A declaration signed by the members of the bidding consortia that includes:

- I. A list of all members of the bidding consortium
- II. National regulation name: Benennung eines bevollmächtigten Vertreters

| National regulation: Name (Firma, Geschäftsbezeichnung) und Geschäftssitz des Bieters; bei |
|--------------------------------------------------------------------------------------------|
| Arbeitsgemeinschaften die Nennung eines zum Abschluss und zur Abwicklung des               |
| Vergabeverfahrens und des Vertrages bevollmächtigten Vertreters unter Angabe seiner        |
| Adresse; schließlich die (elektronische) Adresse jener Stelle, die zum Empfang der Post    |
| berechtigt ist;                                                                            |
| National legal reference: § 108 (1) Z 1 BVergG                                             |
| European regulation name: Authorized representative                                        |
| European regulation: A group of economic operators may be asked to declare an              |
| authorized representative of the bidding consortium                                        |
| European legal reference: not implemented in European Directive                            |
| Template document ID: TD001 at http://www.templatedocument.org                             |
|                                                                                            |

### 6.1.2 Criteria Template 2.0.0 XML File

Using the information provided in section 1.1.1, the following XML fragments provide an overview and descriptions of the most relevant data elements of a Criteria Template XML file.

First of all, a Criteria Template XML file contains general information and meta-data about the Criteria Template itself (*Table 9*):

| <criteriatemplate <="" td="" xmlns="urn:peppol:wp2:schema:xsd:CriteriaTemplate-2"></criteriatemplate>  |
|--------------------------------------------------------------------------------------------------------|
| xmlns:cbc="urn:peppol:wp2:schema:xsd:CommonBasicComponents-2"                                          |
| xmlns:cac="urn:peppol:wp2:schema:xsd:CommonAggregateComponents-2"                                      |
| xmlns:qdt="urn:oasis:names:specification:ubl:schema:xsd:QualifiedDatatypes-2"                          |
| xmlns:udt="urn:un:unece:uncefact:data:specification:UnqualifiedDataTypesSchemaModule:2"                |
| xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">                                                 |
| <cbc:uuid <="" p="" schemeagencyname="ietf" schemeuri="http://tools.ietf.org/html/rfc4122"></cbc:uuid> |
| schemeName="UUID Version 4">8b3f4ae7-3b79-44cd-0854-78f62395745f                                       |
| <cbc:compilationdate>2012-08-01</cbc:compilationdate>                                                  |
| <cbc:compilationtime>15:01:01.001</cbc:compilationtime>                                                |
|                                                                                                        |
|                                                                                                        |

Element nameDefinitionUUIDA universally unique identifier for the Criteria Template.CompilationDateThe date on which the Criteria Template was issued.CompilationTimeThe time on which the Criteria Template was issued.

Table 9 Criteria Template XML data elements

Additionally to general information, the Criteria Template XML document can provide information about the Call for Tender it is related to ("Call for Tender's information" table from the example). The corresponding XML fragment and definition of each data element is given below (*Table 10*).

## ... <cbc:Name>egosta</cbc:Name>

<cbc:Description>Qualification documents can be submitted as scanned copies and there is no specific signature method required. The issuer of an evidence has to be authenticated through a legalization or apostille.

</cac:CallForTender>

<cac:CallForTender>

| Element name              | Definition                                                                                                                                                                                                                                                                            |  |  |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| CallForTender             | Information about the call for tender (identifier, name and description).                                                                                                                                                                                                             |  |  |
| CallForTender Name        | The name of the Call for Tender. If the Criteria Template refers to the Call For Tender, this information must be provided.                                                                                                                                                           |  |  |
|                           | Free text description about the Call for Tender.                                                                                                                                                                                                                                      |  |  |
|                           | Note that:                                                                                                                                                                                                                                                                            |  |  |
| CallForTender Description | <ul> <li>the information about scanned copies, signature and evidences issuer<br/>authentication are here because they apply to all criteria. Alternatively, it is<br/>possible to specify the information at "RequiredCriterion" level (using<br/>"Description" as well).</li> </ul> |  |  |
|                           | Where the Call for Tender required that only specific evidences had a specific requirement, the requirement has to be specified at "Required Criterion" level (using "Description" as well);                                                                                          |  |  |
|                           | <ul> <li>the information about the required translations are not here, even if they<br/>apply to all criteria: they are at "Required Criterion" level where they can be<br/>provided as structured information.</li> </ul>                                                            |  |  |

Table 10 Call for Tender XML data elements

Furthermore the Criteria Template XML document must provide some information about the Contracting Authority and its legal domain ("Contracting authority's information" table from the example). The corresponding XML fragment and definition of each data element are given below (*Table 11 and Table 12*).

| <02 | ac:ContractingAuthorityParty>                           |

<cbc:Domain>Bundesvergabegesetz (BVerG) Austria</cbc:Domain>

</cac:LegalDomain>

| Element name               | Definition                                                                                                                                                                                                                                                                          |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LegalDomain                | The legal domain of the contracting authority, i.e. the national law that defines the legal rules for criteria and evidences.<br>If an ontology has been used, the ontology domain URI of the country in which the economic operator is established or registered must be provided. |
| LegalDomain.<br>DomainCode | The legal domain, expressed as code (as defined in Peppol Domain Code code<br>list).<br>In the example:<br>_ at= Austria                                                                                                                                                            |

| LegalDomain. Domain | The legal domain, expressed as text. |  |
|---------------------|--------------------------------------|--|
|                     |                                      |  |

Table 12 Contracting Authority's legal domain XML data elements

The Criteria Template provides information about criteria the Economic Operator is required to prove. Several criteria lists can be specified depending on tenderer role and type. For instance, the example above requires three criteria lists.

The first one comes from the "*Qualification criteria*" table (that collects the criteria for all Economic Operator types and roles); the corresponding XML fragment is:

| <cac:criterialist></cac:criterialist>                                                                  |

Table 15 Template document Information XML data elements

#### 6.2 Technical validation artefacts

Criteria Template XML document conforms to this PEPPOL BIS if:

- it is valid against the Criteria Template XML Schema (part of VCD 2.0 XML Schemas) and
- it is valid against all validation rules provided in this BIS.

In order to perform these validations following artefact are available:

VCD 2.0 XML Schemas;

 VCD 2.0 Schematrons (including schematron artefacts for checking validation rules on Criteria Template XML documents).

| Artefact<br>Type | File name                  | Location                                                                                                                                                                                  |

Table 16 Technical validation artefacts references

# 7 Technical Interaction Interoperability – eSignature Validation

PEPPOL doesn't require the application of digital signatures on the PEPPOL documents, neither this is in the scope of this PEPPOL BIS.

Here only a recommendation is given: use what is already existing in PEPPOL if documents must be signed. What is available on signature:

- PEPPOL eSignature Validation Infrastructure [PEPPOL\_Sign]
- the use of the Signature inside XML document, as defined by UBL 2.0.

## 8 Technical Interaction Interoperability - Transport

PEPPOL has defined a transport infrastructure based on a set of standardised communication protocols, known as BusDox (Business Document Exchange), which ensures the interoperable, secure and reliable exchange of electronic documents between Economic Operators and Contracting Authorities within the EU.

PEPPOL requires all post-award business documents to be transported using the PEPPOL Transport Infrastructure, while in the pre-award tendering phase Economic Operators and Contracting Authorities can use their own methods of communication.

If they want to use the PEPPOL Transport Infrastructure to exchange pre-awarding documents complying with this PEPPOL BIS, they must fulfil the approach defined in chapter 8.1 of this PEPPOL BIS.

## 8.1 Sending Criteria Template through PEPPOL Transport Infrastructure

All information about PEPPOL Transport Infrastructure and its use can be found on [PEPPOL\_Transp].

The present paragraph defines the further requirements that are necessary to exchange through the PEPPOL Transport Infrastructure the electronic qualification documents defined according with this PEPPOL BIS.

Currently the PEPPOL Transport Infrastructure supports the exchange of messages as transactions having one XML document as payload.

On the other side, as stated in this PEPPOL BIS, the Criteria Template can enclose one or more template document template usually used for self-declarations.

In order to solve the problem, this PEPPOL BIS states that all template document instances must be embedded in the Criteria Template as "Base64 encoded data".

## A. Transactions data models

#### i. Criteria Template

. The **Fehler! Verweisquelle konnte nicht gefunden werden.** shows the elements in a Criteria Template version 2.0. Columns description:

- First two columns show the Cardinality of the element.
- The element name (element preceded with a "+" sign is a class, the rest are simple elements. Element followed by a "6 " sign an element having the same structure of one of its ancestor; its structure is not showed, take the ancestor's structure as reference).
- the third column states business requirements, business rules or code list that may apply to the field;
- the last column states if the element is part of the core data model or not (the core data model is the set of elements that the receiver must be able to process). Elements in core data model are marked with "x".

NOTE: the order of elements when used in Criteria Template must follow the order stated in the below list.

| Min | Max |   | Criteria Template elements                                | Business Requirements/<br>Rules | Core |  |  |  |  |  |  |
